

The Motivator

The Motivator is our solution to moving large camera cranes by allowing one person to position and maneuver the Super Technocrane 50 on the film set without taxing the grip department. The unit is modular and fits on any 30' or 50' Super Technocrane. The Motivator can be mounted and dismantled in minutes. A control console mounts to the existing steering bar, allowing the operator to power the unit, control speed and direction and as well set the parking brake.
